

Summary: This tutorial will teach you how use Click 2 Dial for TricomVoIP

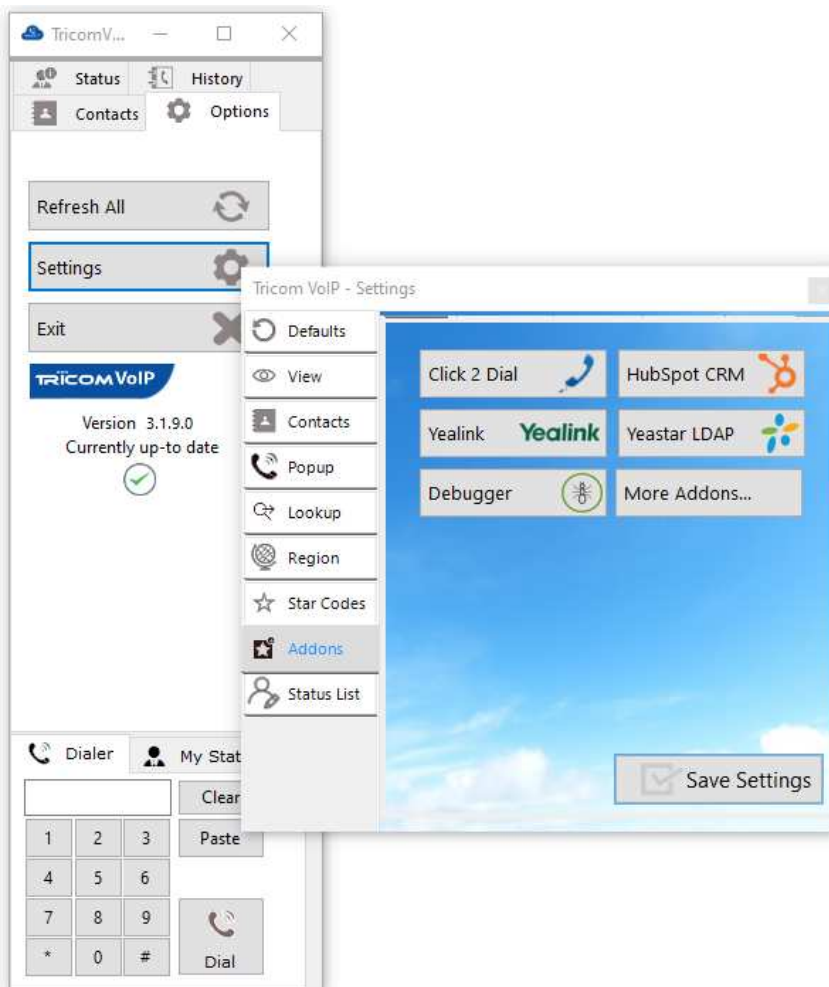

NOTE: If you already have Tricom VoIP Click2Dial installed you do not need to do the following

Step 1:

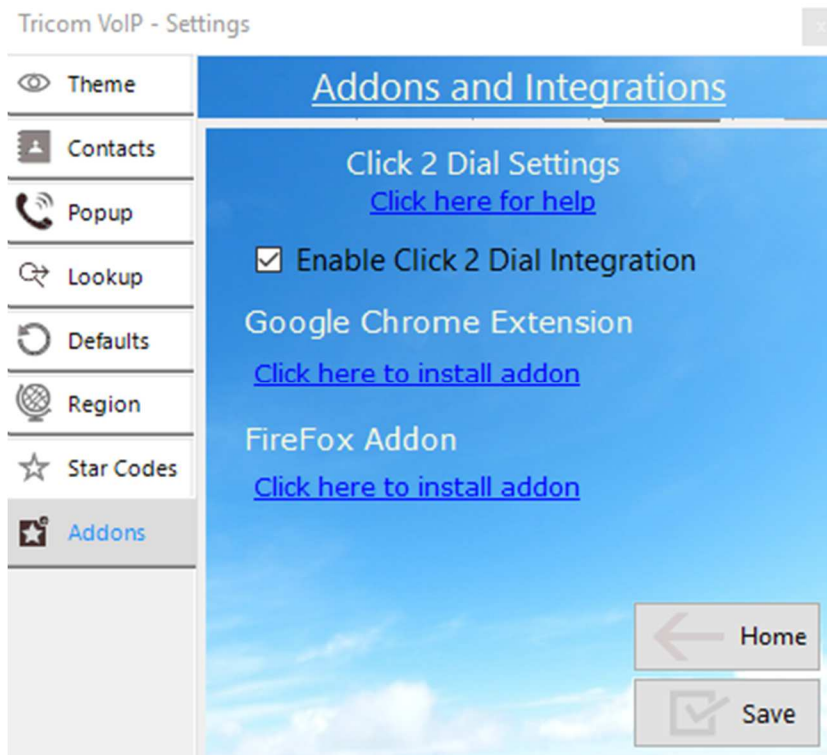

Important - After installing CTI-Desktop Right click TricomVoIP icon and choose Run as Administrator, this will install TricomVoIP as a valid TEL: protocol handler, this only needs to be done once.

Click on the "Options" tab and select "Addons", then Click 2 Dial

Step 1 cont.

Check "Enable Click 2 Dial Integration" to enable Click 2 dial feature

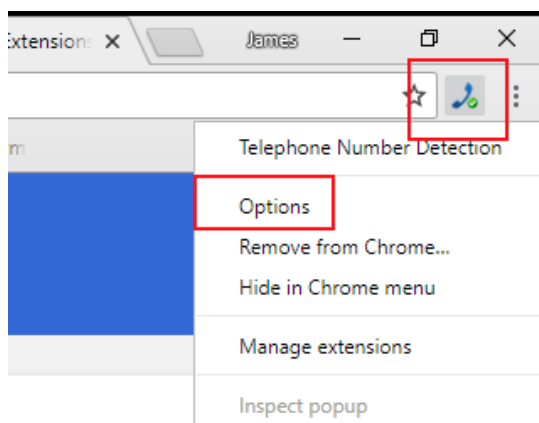

Click "Click here to install the Addon" for each browser required ie (Chrome/FireFox)

Click "Home" then "Save" to save settings

Now open the browser & browsers that you have installed.

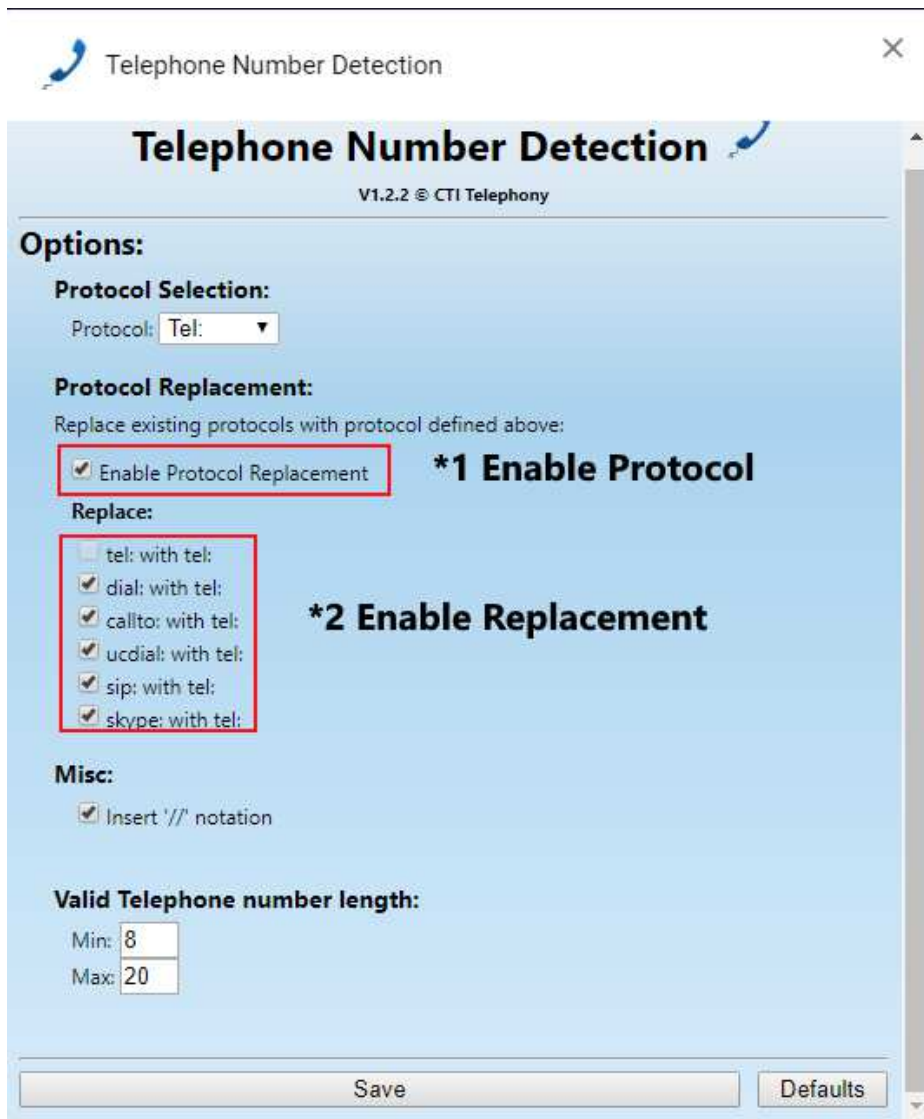

Step 2:

Setup Extension / Addon in Chrome/Firefox

For Google Chrome. Right click the phone icon in the top right of Chrome and select "Options"

Step 3:

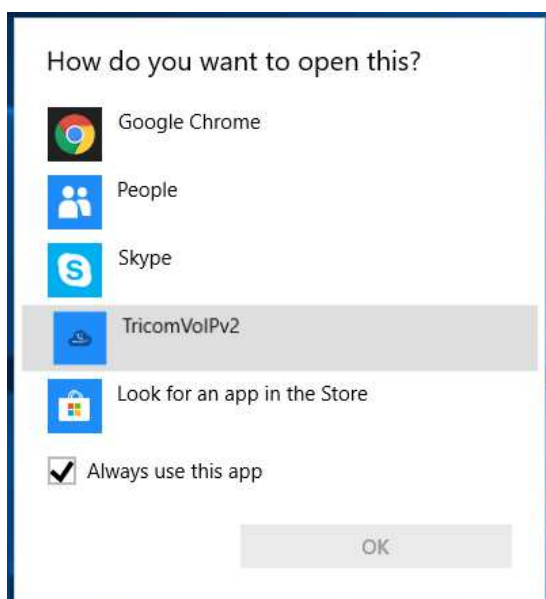

Enable Protocol Replacement and put a check next to each protocol (dial:, callto:, sip: etc)

Click Save and exit the options window

When you browse to a page that has phone numbers on you will notice an icon of a phone.

NOTE - For the first time Chrome / Firefox will ask you which application to open this with

In the selection box provided choose "TricomVoIP" and check the box to remember/always use this option

Phone numbers on web pages in Chrome will now have a icon of a phone next to them, clicking the icon will dial the number on your phone. If you want to disable this feature at any time click the button mentioned earlier in Step 3 to toggle number detection on and off

In the event you find regular numbers are being detected as phone numbers you can increase the min / max amount in the options menu back earlier in Step 3

Note this extension is 3rd party freeware.
